Fast growing

# Company Overview

## **The formation of the Company**

The team under the umbrella of Hanisons Construction has over twenty years of cumulative experience of managing and executing large projects related to the fields listed through professional local and multinational environments.

These professionals have joined hands to utilize their diverse experience to form the platform of Hanisons Construction. Through this arrangement, you can be assured of getting world class products and services according to your specifications and requirements. The team comprises of engineers, managers, fabricators, contract specialists and designers who are ready to take up large projects on turnkey basis.

# Modern Aluminum System

## Modern Aluminum System

We are specialized in making use of modern aluminum systems, in creating aluminum & steel facades, in participating in architectural & aesthetic development in Pakistan especially in providing turnkey solutions for specific projects from design through completion stage.

## Resource Pool

The back end resource pool of design and execution is arranged through in-house team as well as strategic partners in relevant industries. All material and intellectual resources can be made available as per the requirement and time schedule of the project.

Our Technical Partners for Aluminum Cladding and Curtain Walls have been in business for the last decade. They have renowned projects to their laurels. They make use of modern technology in aluminum & steel industry to meet the growing demands of the clients & customers, with the view of ensuring huge construction schemes under governmental & nongovernmental organizations & institutions. They are equipped with automatic machines & equipments as well as necessary supports to meet the requirements of our customers.

Local Sources  
UAE

### 2. Stainless Steel: (Sheets, Tubes, Pipes etc.)

Local Sources  
UAE

### 3. ACP

UAE  
China

### 4. Glass

Local Sources  
UAE

### 5. Accessories & Ironmongery

UAE

# Quality Policy

We are committed to Quality Principles, which will improve customer satisfaction and promote continuous improvement through the involvement of all employees, therefore:

- Quality improvement shall be an ongoing process and shall be a natural part of our day-to-day operations. Our aim is for all deliveries to be completely error-free (zero tolerance). This is a long-term goal based on the belief that we never accept errors. Our quality improvements shall be continuous, even if we have achieved a very low error frequency.
- Management will mean a committed undertaking to the quality work. Managers at all levels within the company will be assessed on the basis of, among other things, the achieved quality objectives.
- Every employee is responsible for the quality of his or her own work and for monitoring quality compliance in the work process. We strive to ensure that everything we do is right first time.
- Choosing either productivity or quality is not the way we do things, for us striving to ensure both is mandatory.
- When it comes to quality, we regard deliveries from one department or fabrication section to another just as important as deliveries to external customers.
- Complaints will be addressed with all possible speed and efficiency.
- We will endeavor to fully understand our customer requirements and are committed to meeting the expectations of our customers, both internal and external.
- We will set ourselves an annual target of overall improvement.
